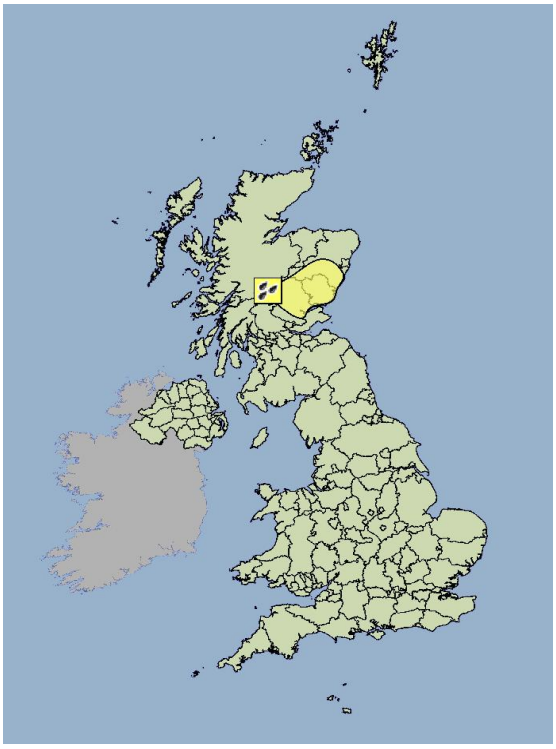
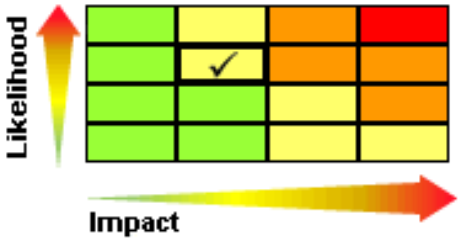
National Severe Weather Warning Service





Chief Forecasters Assessment
An easterly airstream will bring frequent showers to eastern Scotland on Friday. Given recent dry weather, this looks unlikely to produce any impacts initially. However, it is likely to leave conditions more saturated such that the arrival of more persistent rain, in association with a frontal system, brings a greater risk of flooding on Saturday. Over a 48 hour period 20-40 mm rainfall could occur quite widely, with 60-100 mm perhaps accumulating over some east-facing hills.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Sat, 15th Oct 2016** until **18:00 on Sat, 15th Oct 2016**

Showers will merge into longer periods of occasionally heavy rain during Friday and again on Saturday across the northeast of Scotland. This will gradually lift river levels in Tayside, Dundee and Angus, and to a lesser extent Fife and Aberdeenshire, to bring some minor river flooding for Saturday. In addition, be aware of the risk of surface water flooding and spray on roads.

The rain will gradually clear away to the north later on Saturday.
